Professional Summary

AWS Certified Solutions Architect – Associate and Computer Science Engineer with hands-on experience building AWS cloud infrastructure, CI/CD pipelines, containerized applications, and observability systems. Experienced with multi-tier AWS architectures, Linux, Docker, Jenkins, Prometheus, Grafana, networking, and IAM.

Technical Skills

- **Cloud & Infrastructure:** AWS (VPC, Subnets, EC2, Application Load Balancer [ALB], Auto Scaling, S3, Aurora MySQL, IAM, CloudWatch, Route 53, CloudFront), Linux
- **DevOps & CI/CD:** Docker, Docker Compose, Jenkins, **Jenkinsfile**, Git, GitHub, Pytest, Bash Scripting, CI/CD Automation
- **SRE & Observability:** Prometheus, PromQL, Grafana, Alert Rules, Health Checks, HTTP Metrics, P95 Latency
- **Programming & APIs:** Python, Flask, SQL, JavaScript, REST APIs
- **Security & Access Control:** Security Groups, Least-Privilege IAM, Origin Access Control (OAC), Burp Suite, OWASP Top 10

Certifications

AWS Certified Solutions Architect – Associate (SAA-C03) | *Amazon Web Services*
AWS Certified Cloud Practitioner (CLF-C02) | *Amazon Web Services*

2026
2026

Experience

SRE / DevOps Intern

Sept 2026 – Present

Hiyaku Systems

Mohali, India

- Engineered and containerized a modular Python Flask REST microservice with **/health** and **/metrics** endpoints, using Nginx as a reverse proxy.
- Built an end-to-end **Jenkins CI/CD pipeline** using **Jenkinsfile**, automating source checkout, dependency isolation, Pytest execution, Docker image builds, and Docker Compose deployments.
- Configured **Prometheus** scraping at 5-second intervals and built **Grafana** monitoring dashboards for request volume, 5xx errors, and P95 latency with threshold-based alerting.

Application Vulnerability Assessment & Web Security (VAPT)

2025 – 2026

Security Assessment & API Testing

Independent / Academic

- Conducted vulnerability assessments on web applications and REST endpoints using **Burp Suite** for HTTP/HTTPS interception, parameter tampering, and request/response analysis.
- Evaluated server response headers, CORS policies, and client-side authentication mechanisms against OWASP Top 10 guidance to identify and document potential weaknesses.

Projects

AWS 3-Tier High-Availability Web Application

2026

AWS (VPC, EC2, ALB, Auto Scaling, Aurora MySQL, CloudWatch)

- Architected a 3-tier AWS web infrastructure with public web, private application, and isolated database subnets across multiple Availability Zones to improve availability and resilience.
- Configured an internal Application Load Balancer (ALB) and EC2 Auto Scaling Group across Availability Zones to distribute application traffic and dynamically adjust compute capacity based on CloudWatch CPU alarms.
- Restricted **Amazon Aurora MySQL** access to the application security group on port 3306 and configured least-privilege IAM roles with CloudWatch performance monitoring.

Secure Static Website Hosting with S3, CloudFront & Global CDN

2025

AWS (S3, CloudFront, Route 53, IAM, OAC, ACM)

- Deployed static web infrastructure on **Amazon S3** with **Amazon CloudFront** for global content delivery, caching, and Route 53 DNS routing.
- Enforced **Origin Access Control (OAC)** to prevent direct public S3 bucket access, configured SSL/TLS certificate termination via ACM, and implemented custom SPA 404-to-index redirection.

Education

Bachelor of Engineering in Computer Science & Engineering (B.E. CSE)

Graduated: June 2026

Chandigarh University | CGPA: 7.19

Mohali, Punjab, India
