

HARSHIT SAHARAN

AWS Cloud Engineer | DevOps | SRE

+91 9416246795 | harshit777saharan@gmail.com | linkedin.com/in/harshitsaharan | github.com/harsht777 | harshit777.github.io

Professional Summary

AWS Certified Solutions Architect – Associate and Computer Science Engineer with hands-on experience building AWS cloud infrastructure, CI/CD pipelines, containerized applications, and observability systems. Experienced with multi-tier AWS architectures, Linux, Docker, Jenkins, Prometheus, Grafana, networking, and IAM.

Technical Skills

- Cloud & Infrastructure:** AWS (VPC, Subnets, EC2, Application Load Balancer [ALB], Auto Scaling, S3, Aurora MySQL, IAM, CloudWatch, Route 53, CloudFront), Linux
- DevOps & CI/CD:** Docker, Docker Compose, Jenkins, **Jenkinsfile**, Git, GitHub, Pytest, Bash Scripting, CI/CD Automation
- SRE & Observability:** Prometheus (Metric Scraping, PromQL, Alert Rules), Grafana (Dashboards & Visualization), Health Checks, HTTP Metrics, P95 Latency
- Programming & Web:** Python, Flask, SQL, JavaScript, HTML/CSS, REST APIs, Nginx Reverse Proxy
- Security & Analysis:** Security Groups, Least-Privilege IAM, Origin Access Control (OAC), Burp Suite, OWASP Top 10

Certifications

AWS Certified Solutions Architect – Associate (SAA-C03) | *Amazon Web Services*
AWS Certified Cloud Practitioner (CLF-C02) | *Amazon Web Services*

2026
2026

Experience

SRE / DevOps Intern (Assessment & Pipeline Implementation)

Sept 2026

Hiyaku Systems

Mohali, India

- Engineered and containerized a modular Python Flask REST microservice with **/health** and Prometheus **/metrics** endpoints, fronted by Nginx as a reverse proxy on Port 80.
- Built an end-to-end **Jenkins CI/CD pipeline** (**Jenkinsfile**) automating source checkout, dependency isolation, Pytest execution, Docker image builds, and automated Docker Compose deployments.
- Configured **Prometheus** scraping at 5-second intervals and built **Grafana** monitoring dashboards tracking request volume, 5xx error rates, and P95 latency with threshold-based alert rules.

Application Vulnerability Assessment & Web Security (VAPT)

2025 – 2026

Security Assessment & API Analysis

Academic / Practical Testing

- Conducted vulnerability assessments on web applications and REST endpoints using **Burp Suite** for HTTP/HTTPS traffic interception, parameter tampering, and request/response manipulation.
- Evaluated server response headers, CORS policies, and client-side authentication mechanisms against OWASP Top 10 guidelines to identify and document potential security weaknesses.

Key Cloud & Infrastructure Projects

AWS 3-Tier High-Availability Web Application

2026

Cloud Infrastructure Project | AWS (VPC, EC2, ALB, Auto Scaling, Aurora MySQL, CloudWatch)

AWS Cloud

- Architected a 3-tier AWS web infrastructure with public web, private application, and isolated database subnets across multiple Availability Zones to eliminate single points of failure.
- Configured an **internal Application Load Balancer (ALB)** and **EC2 Auto Scaling Group** across Availability Zones to distribute application traffic and dynamically adjust compute capacity based on CloudWatch CPU alarms.
- Restricted **Amazon Aurora MySQL** access to the application security group on port 3306 and configured least-privilege IAM roles and CloudWatch performance monitoring.

Secure Static Website Hosting with S3, CloudFront & Global CDN

2025

Storage & Edge Delivery Project | AWS (S3, CloudFront, Route 53, IAM OAC, ACM)

AWS Cloud

- Deployed static web infrastructure on **Amazon S3** integrated with **Amazon CloudFront** CDN for low-latency global distribution, caching optimization, and Route 53 custom DNS routing.
- Enforced strict **Origin Access Control (OAC)** to block direct public S3 bucket access, configured SSL/TLS certificate termination via ACM, and implemented custom SPA 404-to-index redirection.

Education

Bachelor of Engineering in Computer Science & Engineering (B.E. CSE)

Graduated: June 2026

Chandigarh University | CGPA: 7.19

Mohali, Punjab, India
