

HARSHIT SAHARAN

AWS Cloud Engineer | DevOps | SRE

+91 9416246795 | harshit777saharan@gmail.com | [linkedin.com/in/harshitsaharan](https://www.linkedin.com/in/harshitsaharan) | github.com/harsht777 | harsh777.github.io

Professional Summary

AWS Certified Solutions Architect (Associate) and Cloud Practitioner with hands-on expertise architecting highly available cloud infrastructure on AWS, building automated CI/CD pipelines (Jenkins, Docker), and instrumenting SRE telemetry (Prometheus, Grafana). Experienced in multi-tier network isolation (VPC, Security Groups, ALB), IAM governance, Linux system administration, and proactive reliability engineering.

Technical Skills

- **Cloud Platforms & Compute:** AWS (VPC, Subnets, EC2, ALB, Auto Scaling Groups, S3, Aurora MySQL, IAM, CloudWatch, Route 53, CloudFront), Multi-AZ High Availability, Fault-Tolerant Architecture
- **DevOps & CI/CD Automation:** Docker, Docker Compose, Jenkins CI/CD Pipelines (**Jenkinsfile**), Pytest, Git, GitHub, Linux/Bash Scripting, Automated Testing, Multi-Stage Builds
- **SRE & Observability:** Prometheus (Time-Series Scraping, PromQL, Alert Rules), Grafana (SLA Dashboards, Telemetry Visualization), Health Probes, HTTP Error Rate (5xx) Tracking, P95 Latency Histograms
- **Systems, Networking & Security:** Nginx Reverse Proxy, Security Group Chaining, IAM Least Privilege, Origin Access Control (OAC), REST APIs (Python/Flask, Node.js/Express), Web Security (Burp Suite, OWASP)

Certifications

AWS Certified Solutions Architect – Associate (**SAA-C03**) | *Amazon Web Services*
AWS Certified Cloud Practitioner (**CLF-C02**) | *Amazon Web Services*

2026
2026

Experience

SRE / DevOps Intern (Assessment & Pipeline Implementation)

Sept 2026

Hiyaku Systems

Mohali, India

- Engineered and containerized a modular Python Flask REST microservice with `/health` and Prometheus `/metrics` endpoints, fronted by an Nginx reverse proxy on Port 80 for production traffic handling.
- Constructed an end-to-end declarative **Jenkins CI/CD pipeline** automating code checkout, dependency isolation, Pytest test suites, Docker image builds, and zero-downtime Docker Compose deployment.
- Configured **Prometheus** time-series scraping (5s interval) and designed **Grafana** monitoring dashboards tracking request volume, 5xx error rates, and P95 latency thresholds with active alerting rules.

Application Vulnerability Assessment & Web Security (VAPT)

2025 – 2026

Security Assessment & API Analysis

Academic / Practical Testing

- Conducted vulnerability assessments on web applications and REST endpoints using **Burp Suite** for HTTP/HTTPS traffic interception, parameter tampering, and request/response manipulation.
- Evaluated server response headers, CORS configurations, and client-side authentication mechanisms against OWASP Top 10 guidelines to identify and mitigate potential security weaknesses.

Key Cloud & Infrastructure Projects

AWS Multi-Tier High-Availability Web Application Architecture

2026

Cloud Infrastructure Project | AWS (VPC, EC2, ALB, ASG, Aurora MySQL, CloudWatch)

AWS Cloud

- Architected a 3-tier web infrastructure inside a custom VPC with multi-AZ segmentation across public web, private application, and isolated database subnets to ensure high availability and zero single points of failure.
- Configured an **Internal Application Load Balancer (ALB)** and **Auto Scaling Group (ASG)** across Availability Zones, dynamically adjusting EC2 capacity based on CloudWatch CPU utilization metrics.
- Enforced database isolation on **Amazon Aurora / MySQL** via strict Security Group chaining (inbound port 3306 restricted exclusively to App SG) and IAM role authentication with CloudWatch alarm triggers.

Secure Static Website Hosting with S3, CloudFront & Global CDN

2025

Storage & Edge Delivery Project | AWS (S3, CloudFront, Route 53, IAM OAC, ACM)

AWS Cloud

- Deployed high-performance static web infrastructure on **Amazon S3** integrated with **Amazon CloudFront CDN** for low-latency global distribution, caching optimization, and Route 53 custom DNS routing.
- Enforced strict **Origin Access Control (OAC)** to block direct public S3 bucket access, configured SSL/TLS certificate termination via ACM, and implemented custom SPA 404-to-index redirection.

Education

Bachelor of Engineering in Computer Science & Engineering (B.E. CSE)

Graduated: June 2026

Chandigarh University | CGPA: 7.19

Mohali, Punjab, India
